

CopyFlow Gold™ Specifications

Overview: Because of its **strength in round-tripping text**, the **CopyFlow Gold** XTension for **QuarkXPress** and the CopyFlow Gold plugin for Adobe **InDesign** have been favorites of translation houses for many years. CopyFlow Gold is most often used to export formatted text out of InDesign or QuarkXPress documents to a computerized translation (CAT) system, and then batch import the translated text back into its original page location — all while preserving the typographic formatting. We have recently added CopyFlow Gold for Adobe **Illustrator**.

CopyFlow Gold can cut production time in half, saving time and money. The functionality of the various versions of CopyFlow Gold vary slightly by product and version (e.g., best export formats, encodings, etc.) but the principle is the same. **CopyFlow Gold is a tool to rapidly disassemble and reassemble QuarkXPress, Illustrator and InDesign pages.**

- Round-trip formatted text out of InDesign, Illustrator or QuarkXPress documents to a computerized translation system, and then batch import translated text to its original page location, while preserving the typographic formatting.
- Exports all the text, from the many discrete flows of a document into a single file. The text is sorted in a logical page-by-page order.
- Is Unicode compatible, many export formats and encodings.
- Rapidly disassembles and reassembles Quark, Illustrator or InDesign documents.

Try & Buy: Free demos are available for download www.napsys.com. You can order from our online store with a credit card or your PayPal account; or print out an order form and fax it to us. At purchase time we email registration keys to convert demo software into product.
